SUMMARY

Full-Stack Engineer with **4+ years of experience** building scalable web applications and AI-integrated systems using **Node.js, React, Next.js, NestJS, and TypeScript**. Proven track record of architecting microservices, designing event-driven backends, and shipping LLM-powered features with Azure OpenAI, Claude, and Gemini APIs across production systems.

SKILLS

Languages	JavaScript, TypeScript
Frontend	React.js, Next.js, Redux, Context API, Tailwind CSS, React Query
Backend	Node.js, Express.js, NestJS, GraphQL, REST APIs, tRPC, WebSockets
Databases	PostgreSQL, MongoDB, DynamoDB, Redis, pgvector
Cloud & DevOps	AWS (S3, Lambda, DynamoDB), Docker, CI/CD, Render, Vercel
Architecture	Microservices, Event-Driven Architecture, RabbitMQ, Nx Monorepo
AI / LLM	Azure OpenAI API, Gemini API, Claude API, RAG, Vector Embeddings, SSE Streaming
Tools	Git, Postman, JMeter, Jira, ClickUp, Sequelize, Mongoose, TypeORM

EXPERIENCE

Upsquare Technologies — **Feb 2026 – Present**

Software Engineer | Ahmedabad, Gujarat

SMG (Sway Me Good) – Influencer Marketing Platform | *Node.js, tRPC, GraphQL, AWS Lambda, DynamoDB, Nx Monorepo, Azure OpenAI API*

- Contributed to an **Nx monorepo of 25+ microservices**; independently built two services end to end – *Loyalty* and *Campaign-Auth-Score*.
- Built an **AI authenticity scoring engine** (Azure OpenAI API) that quantifies influencer-to-campaign fit and automates brand-team shortlisting via scheduled **AWS Lambda** jobs with results stored in **DynamoDB**.

VERSYS – Compliance & Document Management System | *Node.js, Express.js, Claude Sonnet, Puppeteer, AWS S3, React, React Query, Tailwind CSS*

- Built a centralised compliance portal managing project records, worker lists, and certificates across multiple construction sites; implemented colour-coded **certification expiry flags** to surface at-risk workers instantly.
- Engineered an **AI document generation pipeline** combining **Salus API** with **Claude Sonnet** to auto-generate SSSP, EMP, and PHA safety documents; rendered to PDF via **Puppeteer** and stored on **AWS S3**.
- Applied **React Query** caching with stale-time tuning to eliminate redundant API calls across all dashboard views, reducing unnecessary network load on repeated navigations.

Spinoto – Mechanic Booking Platform | *React, Next.js, Tailwind CSS*

- Delivered the admin panel and public landing page; **led two junior developers**, reviewed PRs, and drove the product to a stable production release resolving a backlog of UI issues.
- Improved frontend performance by splitting components into **Next.js Server and Client Components**, reducing client-side JS bundle size; scoped API calls to only the data each view required, eliminating over-fetching.

SignPe – Payments Platform Backend | *NestJS, PostgreSQL, TypeORM*

- Architected a **Role-Based Access Control (RBAC)** system with a normalised PostgreSQL schema (roles, permissions, role-permission mapping) for scalable, fine-grained access management.
- Built reusable **NestJS guards and decorators** (`@Roles()`, `@Permissions()`) enabling declarative, route-level access control across all API endpoints.

Meditab Software **Dec 2022 – Jan 2026**
Programmer Analyst | Ahmedabad, Gujarat

- Developed and maintained internal **MERN-stack web applications** supporting QA automation workflows, used daily by multiple engineering teams.
- Shipped three Employee Management Portal modules from scratch – **Flatmate** (room-sharing), **Wall of Fame** (peer recognition), and **Birthday Board** (team celebrations) – using **Node.js, Express, PostgreSQL, and React**.
- Integrated **Socket.io** for real-time tracking of automation script progress and live activity feeds, improving visibility for QA teams.
- Optimised database throughput via **Sequelize connection pooling** and query tuning; reduced unnecessary re-renders using **React.memo** and **useCallback**.
- Offloaded CPU-intensive tasks using **Worker Threads**; benchmarked API performance under concurrent load with **JMeter** to identify and resolve bottlenecks.

Codient Tech **May 2022 – Oct 2022**
Full-Stack Developer | Remote

Dausto – E-Commerce Platform | *TypeScript, Express.js, MongoDB, React + Vite (Admin), Next.js (Storefront), Formik, Zod, MSG91*

- Built core e-commerce modules – Dashboard, SEO Management, Orders, Testimonials, and Wishlist – across the React + Vite admin panel and Next.js storefront, backed by a TypeScript + Express + MongoDB API.
- Implemented **Formik + Zod** for form validation and **MSG91 API** for OTP-based auth and SMS notifications; collaborated in a 6-member agile team using **Jira** and **ClickUp**.

PERSONAL PROJECTS

SkillBridge – AI-Powered Skill Exchange Platform | GitHub
NestJS, Next.js, GraphQL, PostgreSQL, pgvector, Redis, RabbitMQ, WebSockets, Gemini API, Render, Vercel

- Peer-to-peer skill-trading platform; **modular NestJS monolith** with **GraphQL subscriptions** and **Google OAuth**; **semantic skill matching** via **Gemini text-embedding-004 + pgvector** cosine similarity.
- Real-time session chat via **WebSocket + Redis pub/sub**; async workflows on **RabbitMQ** with dead-letter queue; AI session summaries streamed via **Gemini Flash + SSE**; entire stack deployed at **$0/month**.
- Designed the GraphQL schema with **cursor-based pagination** and **DataLoader** for batched resolver queries, preventing N+1 problems under concurrent session loads.

PulseBoard – AI-Powered Developer Observability Platform | GitHub
NestJS Microservices, Next.js, MongoDB, PostgreSQL, Redis, RabbitMQ, SSE, Gemini API

- Open-source Datadog alternative correlating downtime with **GitHub commits** and error logs; generates an **AI incident report** with root cause and fix suggestion via **Gemini Flash**.
- **4-service NestJS monorepo** (API Gateway, Poller, Ingestor, Alert-SRE) over **RabbitMQ**; **semantic log search** via Google Embeddings + **MongoDB Atlas Vector Search (HNSW)**; **Redis SETNX** debounce guarantees one alert per outage.
- Poller service uses a **configurable cron** with per-monitor HTTP health checks; status history persisted in **PostgreSQL** with time-series queries powering the uptime percentage chart on the dashboard.

EDUCATION

Parul Institute of Technology 2019 – 2023
B.Tech in Computer Science and Engineering CGPA: 8.2
